If you were a Sansui fan back in the golden era of audio you would dream of having the 9090DB which, at the time, was the flagship of Sansui's lineup. However, if you were on a budget then you might have had to settle for the middle of the lineup which would have been this receiver - the Sansui 7070. While the 9090DB powered out a hefty 125 watts per channel the 7070 put out a respectable 60 watts per channel.

I used to have a Sansui amp, which my dad passed on to me - it was a beauty. I also until fairly recently had a Sansui turntable - one of their top 1970s models, fully automatic, with separate motors for belt drive and auto tonearm. It was a great TT, even had facility for remote control (with cable).

I like the G series one of the best Sansuis. But there is an error in the power specs for the G-7000 on this page, The 7000 comes in at 80 watts per channel RMS. The G-8000 is rated at 120 watts per channel. They're still all great receivers. They have a well defined sound stage. You really feel like the speakers aren't in the room.

Sansui G-9000DB Repair And Restoration. This Sansui G-9000DB is still operating but is in need of some service. As with all the vintage stereo equipment using deoxit on the pots and switches is a must. Almost always you must do some disassembly to properly clean the controls on any piece of vintage stereo equipment.
